

Package ‘HTSeqGenie’

October 8, 2014

Imports BiocGenerics (>= 0.2.0), IRanges (>= 1.14.3), GenomicRanges (>= 1.7.12), Rsamtools (>= 1.8.5), Biostrings (>= 2.24.1), chipseq (>= 1.6.1), hwriter (>= 1.3.0), Cairo (>= 1.5.5), GenomicFeatures (>= 1.9.31), Parallel, parallel, tools, rtracklayer (>= 1.17.19), GenomicAlignments, VariantTools (>= 1.3.6)

Maintainer Jens Reeder <reeder.jens@gene.com>

License Artistic-2.0

Title A NGS analysis pipeline.

Type Package

LazyLoad yes

Author Gregoire Pau, Jens Reeder

Description Libraries to perform NGS analysis.

Version 3.14.1

Date 2012-03-01

Depends R (>= 3.0.0), gmapR (>= 1.4.3), ShortRead (>= 1.19.13), VariantAnnotation (>= 1.8.3)

Suggests TxDb.Hsapiens.UCSC.hg19.knownGene, LungCancerLines, org.Hs.eg.db

analyzeVariants	<i>Calculate and process Variants</i>
-----------------	---------------------------------------

Description

Calculate and process Variants

Usage

```
analyzeVariants()
```

Value

Nothing

Author(s)

Jens Reeder

`buildGenomicFeaturesFromTxDb`*Build genomic features from a TxDb object*

Description

Build genomic features from a TxDb object

Usage

```
buildGenomicFeaturesFromTxDb(txdb)
```

Arguments

`txdb` A TxDb object.

Value

A list named list of GRanges objects containing the biological entities to account for.

Author(s)

Gregoire Pau

Examples

```
## Not run:
library("TxDb.Hsapiens.UCSC.hg19.knownGene")
txdb <- TxDb.Hsapiens.UCSC.hg19.knownGene
genomic_features <- buildGenomicFeaturesFromTxDb(txdb)

## End(Not run)
```

`callVariantsGATK`*Variant calling via GATK*

Description

Call variants via GATK using the pipeline framework. Requires a GATK compatible genome with a name matching the alignment genome to be installed in 'path.gatk_genome'

Usage

```
callVariantsGATK(bam.file)
```

Arguments

bam.file Path to bam.file

Value

Path to variant file

Author(s)

Jens Reeder

checkGATKJar *Check for the GATK jar file*

Description

Check for the GATK jar file

Usage

```
checkGATKJar(path = getOption("gatk.path"))
```

Arguments

path Path to the GATK jar file

Value

TRUE if tool can be called, FALSE otherwise

detectRRNA *Detect rRNA Contamination in Reads*

Description

Returns a named vector indicating if a read ID has rRNA contamination or not

Usage

```
detectRRNA(lreads, remove_tmp_dir = TRUE, save_dir = NULL)
```

Arguments

lreads A list of ShortReadQ objects
remove_tmp_dir boolean indicating whether or not to delete temp directory of gsnap results
save_dir Save directory

Details

Given a genome and fastq data, each read in the fastq data is aligned against the rRNA sequences for that genome

Value

a named logical vector indicating if a read has rRNA contamination

Author(s)

Cory Barr

`excludeVariantsByRegions`
Filter variants by regions

Description

Filter variants by regions

Usage

```
excludeVariantsByRegions(variants, mask)
```

Arguments

<code>variants</code>	Variants as Vranges, GRanges or VCF object
<code>mask</code>	region to mask, given as GRanges

Details

This function can be used to filter variants in a given region, e.g. low complexity and repeat regions

Value

The filtered variants

Author(s)

Jens Reeder

gatk	<i>gatk</i>
------	-------------

Description

Run a command from the GATK

Usage

```
gatk(gatk.jar.path = getOption("gatk.path"), method, args)
```

Arguments

gatk.jar.path	Path to the gatk jar file
method	Name of the gatk method, e.g. UnifiedGenotyper
args	additional args passed to gatk

Details

Execute the GATK jar file using the method specified as arg. Stops if the command executed fails.

Value

0 for success, stops otherwise

Author(s)

Jens Reeder

getRRNAIds	<i>Detect reads that look like rRNA</i>
------------	---

Description

Detect reads that look like rRNA

Usage

```
getRRNAIds(file1, file2 = NULL, tmp_dir, rRNADb)
```

Arguments

file1	FastQ file of forward reads
file2	FastQ of reverse reads in paired-end sequencing, NULL otherwise
tmp_dir	temporary directory used for storing the gsnap results
rRNADb	Name of the rRNA sequence database. Must exist in the gsnap genome directory

Value

IDs of reads flagged as rRNA

getTabDataFromFile *Load tabular data from the NGS pipeline result directory*

Description

Load tabular data from the NGS pipeline result directory

Usage

```
getTabDataFromFile(save_dir, object_name)
```

Arguments

save_dir A character string containing an NGS pipeline output directory.
object_name A character string containing the regular expression matching a filename in dir_path

Value

A data frame.

hashCoverage *Hashing function for coverage*

Description

Hashing function for coverage

Usage

```
hashCoverage(cov)
```

Arguments

cov A SimpleRleList object

Value

A numeric

Author(s)

Gregoire Pau

hashVariants *Hashing function for variants*

Description

Hashing function for variants

Usage

```
hashVariants(var)
```

Arguments

var A GRanges object

Value

A numeric

Author(s)

Gregoire Pau

hashVector *Hashing function for vector*

Description

Hashing function for vector

Usage

```
hashVector(x)
```

Arguments

x A vector

Value

A numeric

Author(s)

Gregoire Pau

Description

The HTSeqGenie package is a robust and efficient software to analyze high-throughput sequencing experiments in a reproducible manner. It supports the RNA-Seq and Exome-Seq protocols and provides: quality control reporting (using the ShortRead package), detection of adapter contamination, read alignment versus a reference genome (using the gmapR package), counting reads in genomic regions (using the GenomicRanges package), and read-depth coverage computation.

Package content

To run the pipeline:

- runPipeline

To access the pipeline output data:

- getTabDataFromFile

To build the genomic features object:

- buildGenomicFeaturesFromTxDb
- TP53GenomicFeatures

Examples

```
## Not run:
## build genome and genomic features
tp53Genome <- TP53Genome()
tp53GenomicFeatures <- TP53GenomicFeatures()

## get the FASTQ files
fastq1 <- system.file("extdata/H1993_TP53_subset2500_1.fastq.gz", package="HTSeqGenie")
fastq2 <- system.file("extdata/H1993_TP53_subset2500_2.fastq.gz", package="HTSeqGenie")

## run the pipeline
save_dir <- runPipeline(
  ## input
  input_file=fastq1,
  input_file2=fastq2,
  paired_ends=TRUE,
  quality_encoding="illumina1.8",

  ## output
  save_dir="test",
  prepend_str="test",
  overwrite_save_dir="erase",
```

```
## aligner
path.gsnap_genomes=path(directory(tp53Genome)),
alignReads.genome=genome(tp53Genome),
alignReads.additional_parameters="--indel-penalty=1 --novelsplicing=1 --distant-splice-penalty=1",

## gene model
path.genomic_features=dirname(tp53GenomicFeatures),
countGenomicFeatures.gfeatures=basename(tp53GenomicFeatures)
)

## End(Not run)
```

markDuplicates	<i>markDuplicates</i>
----------------	-----------------------

Description

Mark duplicates in bam

Usage

```
markDuplicates(bamfile, outfile = NULL, path = NULL)
```

Arguments

bamfile	Name of input bam file
outfile	Name of output bam file
path	Full path to MarkDuplicates jar

Details

Use MarkDuplicates from PicardTools to mark duplicate alignments in bam file.

Value

Path to output bam file

Author(s)

Jens Reeder

markDups

markDups

Description

Mark duplicates in pipeline context

Usage

markDups()

Details

High level function call to mark duplicates in the analyzed.ba file of a pipelin run.

Value

Nothing

Author(s)

Jens Reeder

realignIndels

realignIndels

Description

Realign indels in pipeline context

Usage

realignIndels()

Details

High level function call to realign indels in the analyzed.bam file using GATK

Value

Nothing

Author(s)

Jens Reeder

realignIndelsGATK	<i>realign indels via GATK</i>
-------------------	--------------------------------

Description

Realigning indels using the GATK tools RealignerTargetCreator and IndelRealigner. Requires a GATK compatible genome with a name matching the alignment genome to be installed in 'path.gatk_genome'

Usage

```
realignIndelsGATK(bam.file)
```

Arguments

bam.file	Path to bam.file
----------	------------------

Value

Path to realigned bam file

Author(s)

Jens Reeder

runPipeline	<i>Run the NGS analysis pipeline</i>
-------------	--------------------------------------

Description

Run the NGS analysis pipeline

Usage

```
runPipeline(...)
```

Arguments

...	A list of parameters. See the vignette for details.
-----	---

Details

This function starts the pipeline. It first preprocesses the input FASTQ reads, align them, count the read overlaps with genomic features and compute the coverage. See the vignette for details.

Value

The path to the NGS output directory.

Author(s)

Jens Reeder, Gregoire Pau

See Also

TP53Genome, TP53GenomicFeatures

Examples

```
## Not run:
## build genome and genomic features
tp53Genome <- TP53Genome()
tp53GenomicFeatures <- TP53GenomicFeatures()

## get the FASTQ files
fastq1 <- system.file("extdata/H1993_TP53_subset2500_1.fastq.gz", package="HTSeqGenie")
fastq2 <- system.file("extdata/H1993_TP53_subset2500_2.fastq.gz", package="HTSeqGenie")

## run the pipeline
save_dir <- runPipeline(
  ## input
  input_file=fastq1,
  input_file2=fastq2,
  paired_ends=TRUE,
  quality_encoding="illumina1.8",

  ## output
  save_dir="test",
  prepend_str="test",
  overwrite_save_dir="erase",

  ## aligner
  path.gsnap_genomes=path(directory(tp53Genome)),
  alignReads.genome=genome(tp53Genome),
  alignReads.additional_parameters="--indel-penalty=1 --novelsplicing=1 --distant-splice-penalty=1",

  ## gene model
  path.genomic_features=dirname(tp53GenomicFeatures),
  countGenomicFeatures.gfeatures=basename(tp53GenomicFeatures)
)

## End(Not run)
```

runPipelineConfig *Run the NGS analysis pipeline*

Description

Run the NGS analysis pipeline from a configuration file

Usage

```
runPipelineConfig(config_filename, config_update)
```

Arguments

```
config_filename      Path to a pipeline configuration file
config_update        A list of name value pairs that will update the config parameters
```

Details

This is the launcher function for all pipeline runs. It will do some preprocessing steps, then aligns the reads, counts overlap with genomic Features such as genes, exons etc and applies a variant caller.

Value

Nothing

Author(s)

Jens Reeder, Gregoire Pau

```
setupTestFramework      setup test framework
```

Description

setup test framework

Usage

```
setupTestFramework(config.filename, config.update = list(),
  testname = "test", package = "HTSeqGenie", use.TP53Genome = TRUE)
```

Arguments

```
config.filename      configuration file
config.update        update list of config values
testname             name of test case
package              name of package
use.TP53Genome      Boolean indicating the use of the TP53 genome as template config
```

Value

the created temp directory

TP53GenomicFeatures *Demo genomic features around the TP53 gene*

Description

Build the genomic features of the TP53 demo region

Usage

```
TP53GenomicFeatures()
```

Details

Returns a list of genomic features (gene, exons, transcripts) annotating a region of UCSC hg19 sequence centered on the region of the TP53 gene, with 1 Mb flanking sequence on each side. This is intended as a test/demonstration to run the NGS pipeline in conjunction with the LungCancerLines data package.

Value

A list of GRanges objects containing the genomic features

Author(s)

Gregoire Pau

See Also

TP53Genome, buildGenomicFeaturesFromTxDb, runPipeline

vcfStat *Compute stats on a VCF file*

Description

Compute stats on a VCF file

Usage

```
vcfStat(vcf.filename)
```

Arguments

vcf.filename A character pointing to a VCF (or gzipped VCF) file

Value

A numeric vector

Author(s)

Gregoire Pau

`wrap.callVariants` *Variant calling*

Description

Call Variants in the pipeline framework

Usage

```
wrap.callVariants(bam.file)
```

Arguments

`bam.file` Aligned reads as bam file

Details

A wrapper around VariantTools callVariant framework.

Value

Variants as Vranges

Author(s)

Jens Reeder

writeVCF

writeVCF

Description

Write variants to VCF file

Usage

`writeVCF(variants.vranges)`

Arguments

`variants.vranges`
Genomic Variants as VRanges object

Value

VCF file name

Author(s)

Jens Reeder
