

# Package ‘TCGAWorkflowData’

January 16, 2025

**Title** Data for TCGA Workflow

**Version** 1.30.0

**Author** Tiago Chedraoui Silva <tiagochst@gmail.com>

**Maintainer** Tiago Chedraoui Silva <tiagochst@gmail.com>

**Description** This experimental data package contains 11 data sets necessary to follow the  
``TCGA Workflow: Analyze cancer genomics and epigenomics data using Bioconductor pack-  
ages".

**Depends** R (>= 3.5.0)

**Imports** SummarizedExperiment

**License** GPL-3

**VignetteBuilder** knitr

**biocViews** ExperimentData, Homo\_sapiens\_Data, MicroarrayData,  
CancerData

**NeedsCompilation** no

**URL** <https://f1000research.com/articles/5-1542/v2>

**BugReports** <https://github.com/BioinformaticsFMRP/TCGAWorkflow/issues>

**RoxygenNote** 7.2.3

**Suggests** knitr, rmarkdown, pander, testthat, BiocStyle

**git\_url** <https://git.bioconductor.org/packages/TCGAWorkflowData>

**git\_branch** RELEASE\_3\_20

**git\_last\_commit** ceef0c4

**git\_last\_commit\_date** 2024-10-29

**Repository** Bioconductor 3.20

**Date/Publication** 2025-01-16

## Contents

---

|     |   |
|-----|---|
| exp | <i>A gene expression matrix for 10 GBM and 10 LGG samples prepared for the creation of an ELMER object.</i> |
|-----|---|

---

### Description

A gene expression matrix for 10 GBM and 10 LGG samples prepared for the creation of an ELMER object.

### Format

A matrix with 21022 rows and 20 samples

### Examples

```
data("elmerExample")
```

---

|         |   |
|---------|---|
| exp_gbm | <i>A gene expression matrix with 20 GBM samples</i> |
|---------|---|

---

### Description

A gene expression matrix with 20 GBM samples

### Format

Gene expression: A SummarizedExperiment object with 21022 rows and 20 columns

### Examples

```
data("TCGA_GBM_Transcriptome_20_samples")
```

---

exp\_lgg

*A gene expression matrix with 20 LGG samples*

---

**Description**

A gene expression matrix with 20 LGG samples

**Format**

Gene expression: A SummarizedExperiment object with 21022 rows and 20 columns

**Examples**

```
data("TCGA_LGG_Transcriptome_20_samples")
```

---

gbm.samples

*Identifiers for the 10 GBM samples in the ELMER objects*

---

**Description**

Identifiers for the 10 GBM samples in the ELMER objects

**Format**

A vector of 10 barcodes

**Examples**

```
data("elmerExample")
```

---

genes

*A data frame object with gene information (hg19)*

---

**Description**

A data frame object with gene information (hg19)

**Format**

A dataframe object

**Examples**

```
data("genes_GR")
```

---

|          |  |
|----------|--|
| genes_GR | <i>A GRanges object with gene information (hg19)</i> |
|----------|--|

---

**Description**

A GRanges object with gene information (hg19)

**Format**

A GRanges object

**Examples**

```
data("genes_GR")
```

---

|                  |   |
|------------------|---|
| gistic_allbygene | <i>A subset of GBM GISTIC2 results, which is used to identify genes targeted by somatic copy-number alterations (SCNAs) From: GDAC firehose, downloaded with RTCGAtoolbox</i> |
|------------------|---|

---

**Description**

A subset of GBM GISTIC2 results, which is used to identify genes targeted by somatic copy-number alterations (SCNAs) From: GDAC firehose, downloaded with RTCGAtoolbox

**Format**

A matrix with 24776 rows and 580 columns

**Examples**

```
data("gbm_gistic")
```

---

|                         |   |
|-------------------------|---|
| gistic_thresholedbygene | <i>A subset of GBM GISTIC2 results, which is used to identify genes targeted by somatic copy-number alterations (SCNAs) From: GDAC firehose, downloaded with RTCGAtoolbox</i> |
|-------------------------|---|

---

**Description**

A subset of GBM GISTIC2 results, which is used to identify genes targeted by somatic copy-number alterations (SCNAs) From: GDAC firehose, downloaded with RTCGAtoolbox

**Format**

A matrix with 24776 rows and 580 columns

**Examples**

```
data("gbm_gistic")
```

---

|               |   |
|---------------|---|
| histone.marks | <i>histone marks specific for brain tissue from the Roadmap database.</i> |
|---------------|---|

---

**Description**

histone marks specific for brain tissue from the Roadmap database.

**Format**

A matrix with 72102 rows and 114 columns

**Examples**

```
data("histoneMarks")
```

---

|             |  |
|-------------|--|
| lgg.samples | <i>Identifiers for the 10 LGG samples in the ELMER objects</i> |
|-------------|--|

---

**Description**

Identifiers for the 10 LGG samples in the ELMER objects

**Format**

A vector of 10 barcodes

**Examples**

```
data("elmerExample")
```

---

|     |   |
|-----|---|
| maf | <i>Merged LGG and GBM GDC MAF files from GDC workflow: Aliquot Ensemble Somatic Variant Merging and Masking</i> |
|-----|---|

---

**Description**

Merged LGG and GBM GDC MAF files from GDC workflow: Aliquot Ensemble Somatic Variant Merging and Masking

**Format**

A matrix with 87957 rows and 141 columns

**Examples**

```
data("maf_lgg_gbm")
```

---

|     |  |
|-----|--|
| met | <i>A SummarizedExperiment containing TCGA data: DNA methylation platform 450K chromosome 9 for 10 LGG samples and 10 GBM samples</i> |
|-----|--|

---

### Description

A SummarizedExperiment containing TCGA data: DNA methylation platform 450K chromosome 9 for 10 LGG samples and 10 GBM samples

### Format

A SumarrizedExperiment with 9861 rows and 20 samples

### Examples

```
data("elmerExample")
```

---

|                  |                               |
|------------------|-------------------------------|
| TCGAWorkflowData | <i>Data for TCGA Workflow</i> |
|------------------|-------------------------------|

---

### Description

This experimental data package has the data necessary to follow the TCGA Workflow: Analyze cancer genomics and epigenomics data using Bioconductor packages. It contains the following files:

- `met20SamplesGBMLGGchr9`: DNA methylation matrix from Infinium HumanMethylation450 platform for 10 LGG (Lower grade glioma) and 10 GBM (Glioblastoma multiforme). It has only probes in chromosome 9 in order to make the example of the workflow faster
- `elmerExample`: Contains a DNA methylation matrix (only probes in chromosome 9) and a gene expression matrix for 10 LGG (Lower grade glioma) and 10 GBM (Glioblastoma multiforme) in the required format for to execute the R/Bioconductor ELMER package analysis and a vector identifying which sample belongs to each tumor type.
- `biogrid`: biogrid information
- `maf_lgg_gbm`: Mutation annotation files for LGG (Lower grade glioma) and GBM (Glioblastoma multiforme) samples merged into a single matrix. The GDC Somatic Mutation Calling Workflow mutect2 was used to create this MAF files.
- `histoneMarks`: histone marks specific for brain tissue using from Roadmap database.
- `genes_GR`: A GRanges Object and a dataframe with gene information (hg19) downloaded from ENSEMBLE database using biomart via TCGAbiolinks
- `TCGA_GBM_Transcriptome_20_samples`: a matrix with raw expression signal for expression of a gene for 20 GBM (Glioblastoma multiforme) samples
- `TCGA_LGG_Transcriptome_20_samples`: a matrix with raw expression signal for expression of a gene for 20 LGG (low grade glioma) samples

For more information how to create these objects please read the vignette of this package with the following command: `browseVignettes("TCGAWorkflowData")`

### Examples

```
data("elmerExample")
data("TCGA_LGG_Transcriptome_20_samples")
data("TCGA_GBM_Transcriptome_20_samples")
data("histoneMarks")
data("biogrid")
data("genes_GR")
data("maf_lgg_gbm")
```

---

tmp.biogrid

*Biogrid information*

---

### Description

Biogrid information

### Format

Two matrices with 24776 rows and 580 columns

### Examples

```
data("biogrid")
```
