

# Package ‘vulcandata’

April 12, 2018

**Type** Package

**Title** VirtUaL ChIP-Seq data Analysis using Networks, dummy dataset

**Version** 1.0.0

**Author** Federico M. Giorgi, Andrew N. Holding, Florian Markowetz

**Maintainer** Federico M. Giorgi <federico.giorgi@gmail.com>

**Description** This package provides a dummy regulatory network and ChIP-Seq dataset for running examples in the vulcan package

**License** LGPL-3

**LazyData** TRUE

**biocViews** ExperimentData, Homo\_sapiens\_Data, CancerData, ChIPSeqData

**NeedsCompilation** no

**Encoding** UTF-8

**RoxygenNote** 6.0.1

**Imports** utils

## R topics documented:

vulcanexample . . . . .	1
vulcansheet . . . . .	2
<b>Index</b>	<b>3</b>

---

vulcanexample	<i>Function to load an example VULCAN dataset into the workspace</i>
---------------	--

---

### Description

This function loads a dummy ChIP-Seq dataset used for VULCAN examples.

### Usage

```
vulcanexample()
```

**Value**

A list of components:

**peakcounts** A matrix of raw peak counts, peaks as rows, samples as columns

**peakrpkm** A matrix of peak RPKMs, peaks as rows, samples as columns

**samples** A vector of sample names and conditions

**Examples**

```
vobj<-vulcanexample()
names(vobj)
vobj$peakcounts[1:5,]
```

---

vulcansheet

*Function to generate an import sheet CSV file for the vulcan test set*

---

**Description**

This function generates a user-specific example sheet with appropriate paths on a dummy ChIP-Seq dataset

**Usage**

```
vulcansheet(outfile = "sheetfile.csv")
```

**Arguments**

outfile            Path and file name for the CSV sheet file

**Value**

nothing

**Examples**

```
vfile<-tempfile()
vulcansheet(vfile)
tmp<-read.csv(vfile)
head(tmp)
unlink(vfile)
```
