

Package ‘ChIC.data’

April 11, 2019

Title ChIC package data

Version 1.2.0

Maintainer Carmen Maria Livi <carmen.livi@ifom.eu>

Description This package contains annotation and metagene profile data for the ChIC package.

Depends R (>= 3.5)

Imports caret (>= 6.0-78)

biocViews ExperimentData, ENCODE

License GPL-2

Encoding UTF-8

LazyData true

RoxygenNote 6.1.0

NeedsCompilation no

Index**12**

chipSubset	<i>ChIP-seq bam file stored as spp tag-list for a subset of chromosomes for the chip</i>
------------	--

Description

Example data for manual and vignette. tag-list created with the `read.bam.tags()` function from `spp` package. The original bam file has been downloaded from ENCODE (ID: ENCFF000BFX).

Usage

```
data(chipSubset)
```

Format

list of 2 elements containing the reads and the read quality of the ChIP.

- `tags` : list containing the start coordinates of each read aligned (ChIP) (3'end)
- `quality`: list containing the read quality of each read

classesDefList	<i>List with definitions</i>
----------------	------------------------------

Description

List containing information about chromatin marks, transcription factors, definitions for broad and sharp class.

Usage

```
data(classesDefList)
```

Format

A list of 5 containing a vector with chromatin mark names, TF names, the members of sharp binding marks, broad binding marks and RNAPol2

- `Hlist`: vector with chromatin marks
- `allSharp`: vector with sharp binding marks
- `allBroad`: vector with broad binding marks
- `RNAPol2` : RNAPol2
- `TF`: vector with TF names

compendium_db	<i>Histone mark compendium</i>
---------------	--------------------------------

Description

Histone mark ChIP-seq compendium for the ChIC package. The compendium contains quality control metrics and metadata for 2329 histone mark samples analysed from ENCODE and Roadmap Epigenomics.

Usage

```
data(compendium_db)
```

Format

Data frame with 366 variables (quality control metrics, metadata) for each analysed sample.

Source

XX

compendium_db_tf	<i>Transcription factor compendium</i>
------------------	--

Description

Transcription factor ChIP-seq compendium for the ChIC package. The compendium contains quality control metrics and metadata for 1427 transcription factors analysed from ENCODE.

Usage

```
data(compendium_db_tf)
```

Format

Data frame with 366 variables (quality control metrics, metadata) for each analysed sample.

Source

XX

compendium_profiles *Metagene profile data for chromatin marks*

Description

Compendium of averaged metagene profiles for the ChIC package. Contains averaged metagene profiles for following ChIP-seq datasets from ENCODE and Roadmap Epigenomics.

Usage

```
data(compendium_profiles)
```

Format

A list of data frames with the coordinates of the metagene profile of the respective chromatin mark.

x : genomic coordinates mean : the mean of the signal intensity in the compendium
sd : the standard deviation of the signal intensity in the compendium
q1..q5 : being the respective quantile of the value distribution
sderr : standard error

`compendium_profiles_TF`*Metagene profile data for transcription factors*

Description

Compendium of averaged metagene profiles for the ChIC package. Contains averaged metagene profiles for following ChIP-seq datasets from ENCODE.

Usage

```
data(compendium_profiles_TF)
```

Format

A list of data frames with the coordinates of the metagene profile of the respective transcription factor.

x : genomic coordinates mean : the mean of the signal intensity in the compendium sd : the standard deviation of the signal intensity in the compendium q1..q5 : being the respective quantile of the value distribution sderr : standard error

crossvalues_Chip	<i>CrossCorrelation values for example ChIP-seq data for Vignette</i>
------------------	---

Description

Example data to be used in the vignette for chrom2

Usage

```
data(crossvalues_Chip)
```

Format

list of 20 elements containing EM scores

hg19_chrom_info	<i>hg19 chromosome information</i>
-----------------	------------------------------------

Description

hg19 chromosome information for the ChIC package.

Usage

```
data(hg19_chrom_info)
```

Format

A named list of int vectors with 2 elements, the start and end position of all hg19 chromosomes.

Source

<http://hgdownload.cse.ucsc.edu/goldenPath/hg19/bigZips/hg19.chrom.sizes>

hg19_refseq_genes_filtered_granges	<i>Filtered RefSeq gene annotation as GRanges</i>
------------------------------------	---

Description

RefSeq gene annotation data for the ChIC package in GRanges format, filtered by the gene length and by overlaps.

Usage

```
data(hg19_refseq_genes_filtered_granges)
```

Format

A GRanges object.

inputSubset	<i>ChIP-seq bam file stored as spp tag-list for a subset of chromosomes for the input</i>
-------------	---

Description

Example data for manual and vignette. Tag-list created with the `read.bam.tags()` function from `spp` package for the input data. The original bam file has been downloaded from ENCODE (ID: ENCFF000BDQ).

Usage

```
data(inputSubset)
```

Format

list of 2 elements containing the reads and the read quality of the input.

- tags : list containing the start coordinates of each read aligned (input) (3'end)
- quality: list containing the read quality of each read

mm9_chrom_info	<i>mm9 chromosome information</i>
----------------	-----------------------------------

Description

mm9 chromosome information for the ChIC package.

Usage

```
data(mm9_chrom_info)
```

Format

A named list of int vectors with 2 elements, the start and end position of all mm9 chromosomes.

Source

<http://hgdownload.cse.ucsc.edu/goldenPath/mm9/bigZips/mm9.chrom.sizes>

`mm9_refseq_genes_filtered_granges`*Filtered RefSeq gene annotation as GRanges for mm9*

Description

RefSeq gene annotation data for the ChIC package in GRanges format, filtered by the gene length and by overlaps.

Usage

```
data(mm9_refseq_genes_filtered_granges)
```

Format

A GRanges object.

`rf_models`*Random forest models for chromatin marks ChIP-seq experiment classification*

Description

Random forest models based on ENCODE and Roadmap data for ChIP-seq experiment classification using the ChIC package.

Usage

```
data(rf_models)
```

Format

A list of 7 random forest models for the different chromatin marks and transcription factors:

- `broadEncode` : model for broad binding marks
- `H3K9Encode` : model for H3K9me3
- `H3K27Encode` : model for H3K27me3
- `H3K36Encode` : model for H3K36me3
- `RNAPol2Encode` : model for RNAPol2
- `sharpEncode` : model for sharp binding marks
- `TFmodel` : model for transcription factors
